In the case of the Woodrat, the animal is of the same superfamily as the Norway Rat and the Black Rat . This superfamily is known as ‘Muroidea’. Just below the superfamily level of biological classification is the family level, which is where Woodrats depart from their Norway Rat and Black Rat cousins.

Woodrats: What Are They and What Do They Do?

Mice like to gnaw on household objects. Gnawed wood, wires, fabrics, and even soaps are a sign a mouse is nearby. Rats live in different areas depending on their species. Some rat species, like roof rats, prefer to live up high in trees, attics, on the roof of a home or building, or in other tall dwellings.
