The portion of a flame arrester or detonation arrester that houses the arrester element and that provides the flanged or threaded connection to the pipe/tank being protected. Flammable Liquid – A liquid having a flashpoint below 100°F. Combustible Liquid – A liquid having a flashpoint at or above 100°F. Confined Deflagration -

### Understanding / Specifying Flame and Detonation Arresters ...

Deflagration Flame Arresters or Detonation Flame Arresters 7 Deflagration is a term describing subsonic combustion propagating through heat transfer where hot burning material heats the next layer of cold material and ignites it.

### Difference between Deflagration and Detonation Flame ...

Flame and Detonation Arrestors. Maximum flow. Minimum pressure drop. We offer a wide variety of flame and detonation arrester products with maximum flow to pressure drop characteristics. Our portfolio includes in-line, free vent, deflagration and detonation flame arrestors. Enardo™ flame arrestors use spiral wound, crimped-metal ribbon flame cell elements to inhibit flame propagation by absorbing and dissipating heat.

A low speed, low pressure confined deflagration can rapidly transition into a high speed, high pressure confined deflagrati n and then to a detonation, which is a flame front moving at the speed of sound in the vapor / air mixture. "Detonation" arresters are especially designed to stop and extinguish detonations, confined deflagrations and unconfined deflagrations.
