Reducing food's environmental impacts through producers and consumers. Science, 360 (6392), 987-992. Food production is responsible for 26% of global greenhouse gas emissions; and food waste is responsible for 24% of that figure. Therefore food waste as a share of global emissions is $[24\% * 26 = 6\%]$.

Environmental impacts of food production - Our World in Data

It is impossible to separate our food production, processing and distribution from our environment. Unfortunately, the industrial or “conventional” way of producing food causes large-scale environmental degradation. Monocropped fields require chemical fertilizers and pesticides that run off into soil and waterways.

How Food and the Environment are Connected | FoodPrint

The Second International Conference on Nutrition (ICN2) was organized jointly by the Food and Agriculture Organization of the United Nations (FAO) and the World Health Organization (WHO) and held at FAO Headquarters in Rome, Italy, from 19 to 21 November 2014. Two outcome documents of ICN2 - the . Rome Declaration on Nutrition. and the

The Environmental Impact of Food Waste. The United Nations estimates that one in nine people in the world do not have access to sufficient food to lead a healthy life. More people are reported to die from hunger every day than AIDS, malaria and tuberculosis combined. But at the same time, nearly one-third of the food that is produced in the world is lost or wasted due to one reason or the other.

The Green Revolution is threatening the biodiversity of the Third World by replacing native seeds with hybrids. We do not know what the long-term environmental or economic consequences will be. We do know that in the short run, such hybrid crops can cause environmental problems by crowding out native plants and the wildlife which relies on them.
