Key Answer. Three sources of genetic variation are mutation, genetic recombination during sexual reproduction, and lateral gene transfer. Genotype consists of the particular combination of alleles and phenotype consists of the physical characteristics displayed by a genetic cross.

Genes and Variation - teachers.henrico.k12.va.us

Variation: is the genetic differences between individuals of the same species that are caused during sexual reproduction, by mutation or as a result of natural selection. Variation within a species is a good thing - it increases the chance that a species will be able to survive if there is a major climate change or an epidemic of some type of disease that the species is vulnerable to.

16-1 Genes and Variation Darwin's original ideas can now be understood in genetic terms. Beginning with variation, we now know that traits are controlled by genes and that many genes have at least two forms, or alleles. We also know that individuals of all species are heterozygous for many genes. To understand evolution, genetic varia-

In this unit about genetic variation, learners help Mosa solve the mystery of why some organisms have identical offspring and others have offspring that exhibit variation. Through the mystery as well as a hands-on modeling activity, learners will discover that organisms can reproduce sexually or asexually, leading to different amounts of ...

Genetic Variation - Mosa Mack Science

Genes encode the information for making specific proteins, which are responsible for the specific traits of an individual. Each gene can have several variants, called alleles, which code for different variants of the trait in question. Genes reside in a cell's chromosomes, each of which contains many genes.

and how they work. Genes are how living organisms inherit features or traits from their ancestors; for example, children usually look like their parents because they have inherited their parents' genes. Genetics tries to identify which traits are inherited, and explain how these traits are passed from generation to generation.
