Identify the Controls... answers - Google Docs

In an experiment, there are multiple kinds of variables: independent, dependent and controlled variables. The independent variable is the one the experimenter changes. The dependent variable is what changes in response to the independent variable. Controlled variables are conditions kept the same.

What Are Dependent, Independent & Controlled Variables ...

A control variable is also called a controlled variable or constant variable. If you are studying the effect of the amount of water on seed germination, control variables might include temperature, light, and type of seed. In contrast, there may be variables you can't easily control, such as humidity, noise, vibration, and magnetic fields.

The Difference Between a Control Variable and Control Group

It is the variable you control. It is called independent because its value does not depend on and is not affected by the state of any other variable in the experiment. Sometimes you may hear this variable called the "controlled variable" because it is the one that is changed.

Independent and Dependent Variable Examples

Think of an independent variable as a cause that produces an effect. A variable is a category or characteristic that's measured in an equation or experiment. An independent variable stands alone and isn't affected by other variables. In a scientific experiment, a researcher changes an independent variable to see how it affects other variables.

3 Simple Ways to Identify Dependent and Independent Variables

Identify the Controls and Variables. advertisement Name: _____ Date: _____ Identify the Controls and Variables Smithers thinks that a special juice will increase the productivity of workers. He creates two groups of 50 workers each and assigns each group the same task (in this case, they're supposed to staple a set of papers).

Identify the Controls and Variables - Studylib

One is called the dependent variable and the other the independent variable. The independent variable is the variable the experimenter changes or controls and is assumed to have a direct effect on the dependent variable. Two examples of common independent variables are gender and educational level.
